Generator electrode with diaphragm for coulometric Karl Fischer titrations, SGJ 29/22. This electrode has a cable connection angled upwards, which simplifies cable guiding and operation when used with the OMNIS Sample Robot Oven.

This generator electrode is well-suited for:

- Samples with very low absolute water content 50 ppm
- Coulometric water content determination in oil samples
- Applications where ketone reagents are used
- Applications where low-conducting reagents are used (addition of chloroform, xylene >10%)

Cable for connecting an analog polarizable electrode (plug-in head G) to an analog measuring module from OMNIS.

Indicator electrode used for coulometric Karl Fischer titration.

For KF coulometers.
