

Power Pack Heavy Metals (Manual)

2.797.3010

Our basic package for the determination of the concentration of the critical heavy metals in all types of water-vapor circulation in thermal power generating stations by means of voltammetry. The system, comprised of a 797 VA Computrace and two 800 Dosinos, performs the determination of a single sample completely automatically. After preparing the sample manually, auxiliary solution and standard solution are added for calibration without user intervention with the aid of two dosing systems of the 800 Dosino type.

797 VA Computrace for trace analysis

The 797 VA Computrace is a modern voltammetric measuring stand that is connected to a PC via a USB port. The computer software provided controls the measurement, records the measured data and evaluates it. Operation is most straightforward due to the well-laid-out structure of the program. The integrated potentiostat with galvanostat guarantees the highest sensitivity with reduced noise.

Voltammetry system for trace analysis and education. Complete accessories with VA Computrace software and all electrodes for a complete measurement system: Multi-Mode Electrode pro (MME pro), Ag /AgCl reference electrode and Pt auxiliary electrode.
